

What is claimed is:

1. A cleaning implement for use with a cleaning substrate, comprising:
a handle;
a cleaning head pivotably connected to said handle;
at least one attachment structure disposed on said cleaning head for receiving and retaining a cleaning substrate about said cleaning head, wherein said attachment structure is formed from a flexible material and wherein said attachment structure further comprises a plurality of substantially pie-shaped sections having an apex and two sides wherein said two sides of each of said pie-shaped sections are defined by slits passing through said flexible material such that each of said pie-shaped sections can be deflected to engage a portion of the cleaning substrate; and
a cleaning substrate removably attached to said mop head such that at least one of said pie-shaped section passes through at least a portion of said cleaning substrate.
2. The cleaning implement of claim 1, wherein said cleaning head comprises a plurality of said attachment structures.
3. The cleaning implement of claim 2, wherein said attachment structure comprises between about 4 and about 10 pie-shaped sections.
4. The cleaning implement of claim 1 wherein said flexible material is made of polyethylene.
5. The cleaning implement of claim 1 wherein said cleaning substrate is made of a woven material.
6. The cleaning implement of claim 1 wherein said cleaning substrate is made of a nonwoven material.
7. A method of cleaning a surface comprising:
mopping a surface with the cleaning implement of claim 1
